tile pattern guide

Grid pattern.

Diamond pattern.

Throughout this brochure, you'll find a variety of tile patterns and borders to liven up the surfaces in any room, anywhere. A dark outline on the pattern indicates where tiles begin to repeat. The key below each pattern tells you the approximate number of pieces per 100 square or linear feet of each tile size required to create each pattern or border.

Hints for getting started:

- Never assume a room is perfectly square – always square off from the center and begin pattern along one edge.
- To avoid rough edges on tile, always float the floor to a level state before installing tile.
- Always round to the next highest footage when calculating square footage of tile needed.
- Random is not a pattern, but a specific look designed by the installer. Most random arrangements need to work on these percentages:

| | | | |
|-----------|-----|-----------|-----|
| 18" x 18" | 47% | 12" x 12" | 36% |
| 12" x 18" | 32% | 6" x 12" | 46% |
| 12" x 12" | 21% | 6" x 6" | 18% |

These percentages will also allow for overage needed due to centering of the layout.

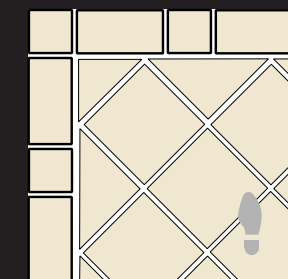

- Modular patterns, if laid according to this guide, will have a solid grout frame every three feet.
- Each diagram represents nine square feet.
- A dark outline on the pattern indicates where tiles begin to repeat.
